STATINTL

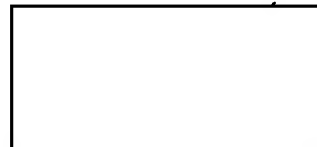

We are in the process of testing our film hold down mechanism. We are using the film sample you sent a few months ago. This sample seems to be specially made; that is, it is larger than standard 4 x 5 sheet film and does not have any notch code. 100 Our device is somewhat dependent upon the film width. Are all your 4 x 5 chips the same width (4 inch dimension) as the one sent? What is the width variation we could expect?

I would appreciate your sending this information as soon as possible. If the 70mm chip is different in width than standard 70mm film, we would like that information also. What length will the 70mm film be? If it will vary, what will its minimum 10' length be? Our design will accept the 70mm chip length up to 5 inches.

chip 250 (4")
MAX 100 (4")
FULL CHIP SIZE

Sincerely,

SAMPLE
